Philosophy

The MBA in IT empowers students to explore the intricacies of information technology concerning organizational goals, effective management, and leveraging information technology for sustained competitive advantage. This program aims to cultivate a comprehensive understanding of IT-related domains, including IT project management, information system auditing, emerging technologies, big data and cloud management, cybersecurity, and IT entrepreneurship. Simultaneously, students acquire not only updated technological knowledge but also essential managerial skills for handling IT projects effectively. Additionally, the program emphasizes the understanding and enhancement of business and management skills.

Overview

Westcliff University's MBA in IT program, offered by the Presidential Graduate School (PGS), is meticulously crafted to meet the unique needs of working professionals. This two-year, 60-credit program provides ample flexibility for students concurrently employed. Distinguished for its competitiveness, the program stands on par with full-time courses offered by international universities. The MBA in IT degree holds international recognition. While aligning with a global curriculum standard for international acknowledgment, it uniquely integrates core values of business management and information technology. Additionally, the program emphasizes cutting-edge skills in both business management and IT, producing human resources well-equipped to meet the demands of both domestic and international markets. It is designed to prepare students as qualified IT professionals at the management level, equipping them for diverse sectors such as government, NGOs, INGOs, IT industries, banks, and various other fields.
